M-100 REDI RAMP

The M-100 Redi Ramps are designed for a variety of applications when loading and unloading your pick-up truck. The M-100 can be installed on any standard American made pick-up truck replacing the tailgate. Alternatively, it can be mounted onto a stand alone leg set and be used as an independent loading ramp.

The M-100 has a loading capacity of 1500 pounds. The ramp surface is 54 inches wide and 86 inches long. When folded and locked in place the ramp will be 41 inches tall (from truck bed to top of ramp).

These ramps are easy to operate and simple to install. The all steel construction with powder coating paint finish requires little maintenance. The open mesh construction creates less air resistance than a standard tailgate, increasing your gas mileage. The M-100 Redi Ramps do not use any cargo space for storage.

EASY TO USE, EASY TO INSTALL

Installing and operating these strong ramps is easy and allows one person to load and unload quickly. They open as a standard tailgate allowing normal pickup bed access.

The M-100 with leg set extends your loading dock for easy pickup truck loading.

The leg set easily adjusts to the height of your pick-up truck.

M-100 REDI RAMP: Easily mounts on any standard sized American made pick-up truck, replacing your tailgate.

M-100 LEG SET OPTION

The M-100 Redi Ramp can be also mounted to a free-standing leg set. This option provides a great transition for loading and unloading pick-up trucks from standard loading docks, or other raised platforms. The legs adjust to the height of the truck (from 24" to 38").

The M-100 and the optional leg set can be used at a fixed location like a construction site, enabling loading and unloading of multiple pick-up trucks using a single ramp system.
